Profile Overview

Aspiring Machine Learning Engineer and Data Analyst with a strong foundation in Python, SQL, machine learning, and data analytics. Passionate about developing data-driven solutions, building predictive models, and extracting meaningful insights from complex datasets. Experienced in working on real-world projects involving data preprocessing, exploratory data analysis, visualization, and machine learning model development. A quick learner with strong problem-solving abilities, eager to contribute technical skills and continuously grow in a collaborative, innovation-driven environment.

Education

MVGR College of Engineering (Autonomous)	2024 - 2028 (Expected)
B.Tech - Computer Science & Engineering	3rd Year (Currently Pursuing)
Coursework: Data Structures, Object-Oriented Programming (OOP), Computer Networks, Operating Systems, Machine Learning	

Experience

- **Thiranex** -- Data Science Internship
- **Scholarx** -- Machine Learning Engineering
- **Internlink** -- Web Development

Technical Skills

Languages & Query: Python, SQL
Machine Learning: Supervised & Unsupervised Learning, NLP, Predictive Modelling
Data & Analytics: Pandas, NumPy, Statistical Analysis, Data Wrangling
Visualisation: Matplotlib, Seaborn, Tableau, Power BI
Tools & Platforms: Git, GitHub, Docker, Jupyter Notebook, Apache Kafka

Projects

- **SunnyClass AI** -- Developed an AI-powered online classroom monitoring system that uses real-time analytics to track student attendance, engagement, and participation, providing intelligent insights to improve virtual learning outcomes.
- **Multi-Agent Commerce OS** -- Built an operating layer for an online business where eight specialised AI agents observe events, investigate with typed tools, collaborate on findings, and execute actions under a governance pipeline that decides what they may do alone and what needs a human.
- **Face ID + Blockchain Verification** -- Developed an AI-powered identity verification pipeline that detects and encodes faces from images, performs reverse-image verification against authentic social media sources, and records verified matches on blockchain for tamper-evident validation.
- **Voice-Enabled RAG Model** -- Built an end-to-end voice-enabled Retrieval-Augmented Generation (RAG) system integrating speech-to-text transcription, optimized document chunking, vector-based semantic retrieval, and grounded response generation with safety guardrails.

Soft Skills

Critical Thinking - Effective Communication - Problem Solving - Teamwork & Collaboration - Time Management - Leadership

Certificates

- Data Analyst 101 Certificate
- Python Essentials Certificate
- Machine Learning Using Python Certificate
- Google Cloud AI Tools Certificate
- Google Developers Hackathon Participation Certificate
- C Essentials Certificate
